(11) MECHANICAL DESIGN ENGINEERING Program (MDE)

برنامج هندسة التصميم الميكانيكي

كلية الهندسة Faculty of Engineering

(11) Mechanical Design Engineering Program (MDE)

برنامج هندسة التصميم الميكانيكي

رؤية البرنامج VISION

The vision of the mechanical design engineering program is offering educational program where education, learning and scientific research synergize to provide the society with the innovative mechanical design engineer capable of providing optimal solutions and leading improvement in his profession and contributing to the country's progress.

طرح برنامج تعليمي يتكاتف فيه التعليم والتعلم والبحث العلمي على إمداد المجتمع بمهندس تصميم ميكانيكي مبتكر قادر على تقديم الحلول المثلى وقيادة التطوير في مهنته والمساهمة في تقدم البلاد.

رسالة البرنامج MISSION

The mission of the mechanical design ergineering program is to offer distinguished academic services to provide the labor sector and the community with qualified mechanical design engineers capable of competing locally, regionally, and internationally and effectively applying the acquired scientific, technical knowledge and skills to resolve industrial problems and provide solutions and have the capacity for professional self-career development.

تقديم خدمة تعليمية متميزة لإمداد قطاع الأعمال والمجتمع باحتياجاتهم من مهندسي التصميم الميكاتيكي القادرين على المنافسة محليا وإقليمياً ودوليا وعلى الاستخدام الكفء والفعال للعلوم والمعارف الثقلية والمهارات لحل مشاكل الصناعة وتقديم الحلول والقادرين على التطوير الذاتي مهنياً.

GRADUATE ATTRIBUTES (Profession Profession

The mechanical engineering program has the following set of educational objectives:

- Attracting outstanding local, regional and international students by providing distinguished academic services and encouraging competitive scientific activities.
- Providing the students with the fundamentals and foundation of basic and engineering sciences to solve technical problems.
- Providing the students with broad professional education that covers the contemporary and growing aspects in the field of mechanical engineering.
- 4. Upgrading students' skills in the areas of effective communication with others and working effectively within a team, as well as raising the skills of innovative and creative thinking, with an emphasis on adherence to professional ethics

Providing an attractive working environment for distinguished faculty members and providing them with the facilities fcr improving performance and continuous development.

- Developing the program's courses to keep pace with the successive developments in science and raise the competitiveness of the graduates.
- Improving laboratory facilities to support effective learning and research activities.
- Seeking cooperation with local, regional and international educational and professional bodies to improve student's realization capacities and practical skills.

مرجعية البرنامج PROGRAM BENCHMARK

NARS 2018	LEVEL A	LEVEL B	LEVEL C	LEVEL D
1	Totally Adopted	Totally Adopted	See below	NA

The MDE program has adopted the National Academic Reference Standards (NARS) for Engineering issued by the National Authority for Quality Assurance and Accreditation for Education (NAQAAE) as the program objects to ensure the satisfaction of the national quality assurance standards. The NARS 2018 for Engineering are broad statements that define the main characteristics and performance expected from all engineering students (LEVEL A) upon their graduation so that the MDE program graduate must be able to:

- Master a wide spectrum of engineering knowledge and specialized skills and can apply acquired knowledge using theories and abstract thinking in real life situations.
- 2. Apply analytic critical and systemic thinking to identify, diagnose and solve engineering problems with a wide range of complexity and variation.
- 3. Behave professionally and adhere to engineering ethics and standards.
- Work in and lead a heterogeneous team of professionals from different engineering specialties and assume responsibility for own and team performance.
- Recognize his/her role in promoting the engineering field and contribute to the development of the profession and the community.
- Value the importance of the environment, both physical and natural, and work to promote sustainability principles.
- Use techniques, skills, and modern engineering tools necessary for engineering practice.
- Assume full responsibility for own learning and self-development, engage in lifelong learning and demonstrate the capacity to engage in post- graduate and research studies.

- Communicate effectively using different modes, tools, and languages with various audiences; to deal with academic/professional challenges in a critical and creative manner.
- 10. Demonstrate leadership qualities, business administration and entrepreneurial skills.

In addition to the Competencies for All Engineering Programs the BASIC MECHANICAL Engineering (LEVEL A) must be able to:

- Model, analyze and design physical systems applicable to the specific discipline by applying the concepts of: Thermodynamics, Heat Transfer, Fluid Mechanics, solid Mechanics, Material Processing, Material Properties, Measurements, Instrumentation, Control Theory and Systems, Mechanical Design and Analysis, Dynamics and Vibrations.
- Plan, manage and carry out designs of mechanical systems and machine elements
 using appropriate materials both traditional means and computer-aided tools and
 software contemporary to the mechanical engineering field.
- Select conventional mechanical equipment according to the required performance.
- Adopt suitable national and international standards and codes; and integrate legal, economic, and financial aspects to design, build, operate, inspect and maintain mechanical equipment and systems.

In addition to the competencies of all engineering and basic mechanical engineering, the Mechanical Design Engineering (LEVEL C) graduate must be able to:

- Use the concepts acquired to evaluate, develop, design, and improve the mechanical systems integrated with the electrical, thermal and hydraulic systems within the industrial projects.
- Familiarize with the manufacturing process, the effective use of available resources and facilities, project planning and management, time and budget management, safety, and the standard regulations to execute reliable design.

	Training on industrial establishments relevant to the program. Training lasts for a total of 180 hours, during a minimum period of six weeks. The program training advisor schedules at least two follow-up visits to the training venue and formally reports on performance of trainee(s). A Mentor in the industrial establishment provides a formal report on the student's performance during training. The student submits a formal report and presertation to be evaluated by a panel of three members with one member being an external examiner appointed from industry or other colleges of engineering. The course is graded as Pass/Fail grade-s/stem.									
MDES481	Graduation Project-1	1	0	2						2
	Pre-requisites: 110 credits + SOPHOMORE									
11050400	Students – in groups (or individually in some programs) - undertake a final project as part of the program. In GP1, students provide a clear identification of a real-life problem that represents an actual need for the industry or the community and reflects the mission and strategic objective of CUFE. Students are expected to survey the related literature, collect, and interpret market data, and proposed an approach for the solution, using the engineering knowledge and skills acquired. The course is graded as Pass/Fail based upon a report/oral presentation stating the expected cost and required material, tools, and facilities as well as a timed list of deliverables.

Selecting a proper PLC configuration for a given application. Hardware structure and wiring techniques. Basics of programming (bit and word programming, analogue values processing). Programming sequential control tasks. Structured programming techniques. Networking. Building simple supervisory control and data acquisition (SCADA) system integrated with a PLC for sequential control problems. Course project.

MDPS323 Modern Manufacturing 3 2 2 0 0 4

Processes 4

Pre-requisites: MDPS241 + MDPS242

Gear and thread manufacturing; non-conventional metal cutting; Electro-chemical

machining; Electro discharge machining; Laser beam machining; Electron beam machining; Water jet machining; Rapid Prototyping; micro system product; micro fabrication processes; Property enhancing of metals; cleaning and surface treatment; Coating and deposition processes; Thermal and mechanical coating; Processing of integrated circuit.

MDPS353 Mechanism Design 3 2 2 0 0 4

Pre-requisites: MDPS355

Introduction and basic concepts, Mechanisms and structures, Number synthesis, Paradoxes, Isomers, Linkage transformation, Intermittent motion, Inversion, Function path and motion generation Graphical synthesis of planar mechanisms: Two-position synthesis, Three-position synthesis, Quick-return mechanisms, Coupler curves, Analytical synthesis of planar mechanisms, Optimal planar mechanism synthesis, Analytical synthesis of simple toggles, Introduction to spatial mechanism synthesis, simulation using Computer Graphics and MATLAB Software and case studies. Course project
