Section 10

Electrical Energy Engineering Program (EEE)

Based on Credit Hours System (CHS)

June 2017

1. INTRODUCTION

Industrial development, assimilation of population growth and meeting increasing demand for electrical energy cannot be achieved without population well awareness and expertise in Electrical Power Engineering, Computer and Electronics, and Industrial Applications. Furthermore, Egypt -with its unique geographic location, size of population and available expertise- can play a leading role in modern industries and electrical energy exchange in the Arab world as well as in African countries. In response to this situation, the Faculty of Engineering at Cairo University, the oldest and one of the most prestigious schools of engineering in the Arab world is proposing to establish a modern bachelor program in Electrical Energy Engineering (EEE) based on the credit-hours system (CHS) of education.

2. PROGRAM MISSION

The mission of the Electrical Energy Engineering (EEE) program at Cairo University is to provide the highest standard of excellence in higher education while pursuing continuous quality improvement. The goal of the program is to provide the community with graduates in the area of electrical energy and power capable of effectively using the scientific and technical knowledge developed as undergraduates for the betterment of society. The problem-solving, teamwork, and oral communications skills developed by the graduates of EEE program will also contribute to achieving this goal. The EEE program supports this mission by providing students with appropriate curricula and educational experiences. The curricula would be subjected to continuous assessment by employers, faculty, and students. Students obtain the broad education necessary to understand the impact of electrical energy systems solutions in a global, societal, and cultural context.

The bachelor degree program in Electrical Energy Engineering allows a plan that will necessarily be highly structured during the first four semesters and relatively flexible during the upper six semesters, which constitute the proposed Major semesters. This is achieved by providing the students an assortment of elective courses during the senior years, which will further shape the student's readiness to serve in real life employment tracks. The EEE program provides a laboratory-based curriculum that combines hands-on practice with the appropriate basic electrical and electronic theory. It is application-oriented and is designed to prepare well rounded graduates who can succeed in one or more of the fields related to electrical energy systems technologies.

3. EDUCATIONAL OBJECTIVES

The EEE program pursues the following main educational objectives:

1. To provide students with the understanding of fundamental knowledge prerequisite for the practice of, or for advanced study in, electrical energy systems engineering, including its scientific principles, rigorous analysis, and creative design.

- 2. To provide students with the broad education, including knowledge of important current issues in electrical energy systems engineering, that is necessary for productive careers in the public or private sectors, or for the pursuit of graduate education.
- 3. To enable graduates to work not only in local markets but also in regional (particularly, in the Arab and African regions) and international markets.
- 4. To develop skills for clear communication and responsible teamwork, and to emphasize professional attitudes and ethics, so that graduates are prepared for the complex modern work environment and for lifelong learning.
- 5. To provide an environment that enables students to pursue their goals in an innovative program that is rigorous and challenging, open and supportive.

4. PROGRAM LEARNING OUTCOMES

The following academic reference standards represent the general expectation about the qualifications attributes and capabilities that the graduates of the Electrical Energy Engineering program should be able to demonstrate.

4.1 Knowledge and Understanding

On successful completion of the program, the graduates must be able to demonstrate knowledge and understanding of:

- a1. Concepts, principles and theories relevant to EEE and manufacture
- a2. Applied science, mathematics and the technological base relevant to EEE
- a3. The constraints within which his engineering judgment will have to be exercised
- a4. The specifications, programming and range of application of CAD and CAD/CAM facilities
- a5. Relevant contemporary issues in EEE
- a6. Basic electrical, control and computer engineering subjects related to the discipline
- a7. The role of information technology in providing support for EEE
- a8. Engineering design principles and techniques
- a9. Characteristics of engineering materials
- a10. Management and business techniques and practices appropriate to engineering industry

4.2 Intellectual Skills

On successful completion of the program, the graduates must be able to:

- b1. Adopt creative and innovative thinking in solving problems, and in designing products, systems, components and processes
- b2. Apply the principles of mathematics, science and technology in problem solving scenarios in EEE
- b3. Analyze and interpret data, and design experiments to obtain primary data;
- b4. Design systems, components or processes to meet specific needs
- b5. Evaluate and appraise designs, processes and products, and propose improvements
- b6. Assess risks, and take appropriate steps to manage those risks

- b7. Interpret numerical data and apply analytical methods for design purposes
- b8. Use the principles of engineering science in developing solutions to practical EE problems
- b9. Solve EEE and product design in engineering problems
- b10. Create new engineering components and processes through the synthesis of ideas from a range of sources
- b11. Use computational tools and software packages pertaining to the discipline and develop required computer programs

4.3 Practical and Professional Skills

On successful completion of the program, the graduates must be able to:

- c1. Use a wide range of analytical and technical tools, techniques and equipment, including pertinent software
- c2. Prepare engineering drawings, computer graphics and specialized technical reports and communicate accordingly
- c3. Carry out specialized engineering designs
- c4. Employ the traditional and modern CAD and CAD/CAM facilities in design and production processes
- c5. Use basic workshop equipment safely
- c6. Understand and apply safe systems at work
- c7. Analyze experimental results and determine their accuracy and validity
- c8 Use laboratory equipment and related computer software
- c9. Demonstrate basic organizational and project management skills
- c10. Operate and maintain EEE equipment
- c11. Refer to relevant literature effectively

4.4 General Transferable Skills

On successful completion of the program, the graduates must be able to:

- d1. EE Program graduates will be able to communicate effectively, apply IT technologies, and develop skills that are life enriching and have value in other occupations
- d2. Present data/results in alternative forms for better understanding and/or greater impression, and utilize appropriate level of delivery
- d3. Communicate effectively the information in verbal and writing.
- d4. Develop systematic thinking skills to solve general problems and identify critical factors\
- d5. Evaluate given information and derive practical and new solutions
- d6. Perform efficient teamwork in multi-member projects
- d7. Understand the usage of common IT tools
- d8. Realize the need for life-long learning and develop aptitude for continuous and independent learning of new concepts and information

5. MARKET NEEDS ASSESSMENT

Educational programs are planned to meet the job market needs and fulfill national (and/or regional) strategic plans. Therefore, it is expected that graduates of the EEE

program will be ever in greater demand in order to implement the Egyptian Government economic development plans. This will drastically enhance the overall employability of EEE graduates .

The EEE program has been preceded by a thorough investigation of exact needs of the particular market it is targeting, zone-wise and skills-wise. The planning details and specifics of the Electrical Energy Engineering program was carried out in view of the following important main contexts:

- Egypt's electrical power engineering job market needs (and graduate attributes).
- National Academic Reference Standards (NARS) for electrical power engineering set by the Supreme Council of Universities (SCU)
- National strategic plans, which emphasize maintaining and/or enhancing Egypt's regional and international leadership

It should be stated here that deep reading of the above mentioned contexts should not only take into consideration current status but expected potential international future developments as well.

In an effort to assess job market needs and graduate attributes a number of experts (from semi-governmental industrial agencies as well as private sector SMEs) were approached to provide some feedback on qualifications and weaknesses of currently available Electrical Power programs in Egypt. It should be stated here that work activities of those who were particularly targeted gave them the opportunity to deal with and/or assess technical attributes of such graduates. Their feedback revealed the following numerous elements of weakness, namely, lack of each of the following: self-motivation, creativity, writing skills, ethical and legal knowledge, marketing skills and management skills. These weaknesses are properly addressed in the proposed EEE curriculum. The same feedback also stressed the need to include in any newly planned Program a considerable dosage of practical training and to orient students on how the various components of this Program are inter-related as well as to real life practices.

Meanwhile, regionally and internationally speaking, fast technological developments in recent decades in addition to new national aspirations driven by global conventional energy reserve situations have highlighted the need to focus on renewable energy issues as well as power engineering components linked to nuclear power generation. This fact is further stressed in view of international and Egyptian Government's plans to increase percentage of non-conventional power generation over the coming two decades. Moreover, taking into account that Egypt's human resources in general and engineers in particular have always had some share in regional job markets and in view of new job market competitors implicated by globalization efforts, it was necessary to tailor the new Program to international standards as well. For instance, it was stressed in a 2007 US National Science Foundation (NSF) workshop on the "Future Power Engineering Workforce" that there was serious need to incorporate communications in electric energy technologies, solve newly encountered challenges such as those arising in offshore power generation units and cope with new power electronics, energy conversion and new generation and storage technologies.

Specifics of the Electrical Energy Engineering program are tailored to address all of the aforementioned facts, issues and concerns, and – more importantly – with full conformity to NARS. As can be seen from the details of this Program's curriculum different new components were introduced (in the form of new courses) and some old components were revisited (in the form of new course contents). Samples of such components include new renewable energy related courses, modifying courses to highlight its applied and industry-related nature and tailor courses to cope with well observed current graduate weaknesses (such as marketing skills, legalities and communication skills). In brief, the EEE program under consideration has been tailored to be an active tool that addresses and supports national plans and concerns in the next decade.

6. PROGRAM DESCRIPTION

To prepare the student for the above targeted Educational Objectives, a set of program outcomes, that describes what students are expected to know and is able to do by the time of graduation, have been adopted. Those outcomes are based on direct market needs and fall in line with the criteria forged by reputable international accrediting bodies, most notably ABET, USA.

The EEE program offers instructions in numerous topics in the areas of power engineering, power electronics, industrial automation, as well as computer engineering and communications. By the end of the program, the students are expected to gain deep knowledge and skill in the design and study of automated and intelligent energy systems, electrical machine drives, electronic converters, design & performance of power systems, automatic control systems, etc. The students are expected to complete the degree requirements in 10 main semesters. High caliber students may finish in 9 main semesters.

6.1 Curriculum Overview

The curriculum of the EEE program consists of 180 credits spread over 69 courses covering topics in Humanities and Social Sciences (HSS), Basic Sciences (BS), Engineering Sciences (ES), and Applied Engineering Sciences (AS) as required by the Supreme Council of Universities (SCU).

The curriculum of the EEE program is devoting special attention to issues that are capturing worldwide attention such as:

- Renewable energy: its generation, integration and control.
- The Smart Grid, which is becoming a Program goal of power engineers and governments around the world.
- The adverse environmental impact of developments in the area of electrical energy, or, the price of electrical energy development.

The curriculum includes courses in engineering fundamentals such as: electronics, circuits, communication, automatic control, logic design, and microprocessors. Furthermore, the curriculum covers data structures and algorithms, advanced

mathematics, physics, economics, management and humanities. In the specialized area, advanced and detailed courses are offered. Courses specific to electrical energy include: Control Systems, Power System Operation, Power Electronics, High Voltage Technology, Mechatronics (the combination of mechanical engineering, electronic control and systems), and Electrical Machine Drives.

The curriculum offers to the students the opportunity to select not only the program specialty but also many elective courses within the program. The electives can be grouped into two main groups. The first group serves the student, who is looking forward to working in the areas of electrical energy generation, conversion, integration, transmission and distribution, etc. The second group serves the student who intends to work in the area of industrial applications of electrical power, including computer control, control of electric drives and automation, etc.

6.2 University Requirements

The main purpose of a university education is not only to prepare students for successful careers but also to provide them with the knowledge and skills to develop a rational, well-rounded and successful personal identity. Moreover, Cairo University helps students to gain an appreciative understanding of the natural and cultural environments in which they live and their roles in the society and community services.

The university requirements of the CHS bachelor programs consist of 24 credits (13.3% of total 180 credits), which are satisfied by completing twelve (12) courses:

- 1. Nine (9) compulsory courses equivalent to 18 credits (10.0%), as listed in Table 1a.
- 2. Three (3) elective courses equivalent to 6 credits (13.3%), as listed in Table 1b.

	Code	Course Title	Credits

Table 1b Elective Courses of University Requirements(6 credits, 3.3% of total 180 credits)

Remarks:

(1) Student selects at least three (3) courses equivalent to 6 credits

6.3 College Requirements

College requirements provide students with the knowledge and skills that are essential to develop a successful engineer. A college core that is common to all credit hours programs is implemented. This unified college core contains two categories of courses. The first category of college core courses includes courses of basic knowledge essential to all engineering graduates such as Mathematics, Physics, Mechanics, Graphics and Design, Manufacturing, and Chemistry. The second category includes courses that all students are required to undertake in order to develop certain intended learning outcomes common to all engineering graduates, such as Seminar, Industrial Training, and Graduation Project courses.

The college requirements of the CHS bachelor programs consist of 45 credits (25.0% of total 180 credits), which are satisfied by completing nineteen (19) compulsory courses, as listed in Table 2.

	Code	Course Title	Credits
1	CHEN001	Chemistry	3
2	GENN003	Basic Engineering Design	2
3	MDPN001	Engineering Graphics	3
4	MDPN002	Fundamentals of Manufacturing Engineering	3
5	MECN001	Mechanics-1	2

19	EEEN481	Graduation Project-2	3

6.4 Discipline Requirements

Students who wish to pursue a bachelor degree in the EEE program have first to finish the discipline-core requirements for Electrical Engineering. The discipline requirements consist of 72 credits (40.0% of total 180 credits), which are satisfied by completing twenty-four (24) courses, as listed in Table 3. Eleven (11) of these courses are interdisciplinary courses (coded by CVE, CMP, ELC, INT, MEP, MTH, PHY), which are equivalent to 33 credits (18.3%). All the discipline core courses are compulsory.

6.5 Major Requirements

The program offers a major specialty in Electrical Energy Engineering which requires the successful completion of at least 39 credits (21.7% of total 180 credits), which are satisfied by completing fourteen (14) courses as follows:

- 1. Nine (9) compulsory courses equivalent to 24 credits (13.3%), as listed in Table 4.
- 2. Five (5) elective courses equivalent to 15 credits (8.4%), as listed in Table 5. Subject to the academic advisor (AA) approval, the student should select either four (4) courses from the first set A equivalent to 12 credits and one (1) course from the second set B equivalent to 3 credits; or four (4) courses from set B equivalent to 12 credits and one (1) course from set A equivalent to 3 credits

Remarks:

(1) Student selects at least five (5) courses from group E-2 equivalent to 15 credits subject to the AA approval

6.6 Conformity to SCU Requirements

The classification and categorization of the courses offered by the Electrical Energy Engineering program follow the guidelines provided by the Supreme Council of Universities (SCU), as shown in Table 6. The classification is based upon the "Sample Study Plan and Course Sequence" described in Section 7. The categorization is given for the following five student levels according to the regulations of the credit hours system of education at the Faculty of Engineering, Cairo University:

- Freshman: a student who completed less than 36 credits
- Sophomore: a student who completed more than 35 credits but less than 72 credits
- Junior: a student who completed more than 71 credits but less than 108 credits
- Senior-1: a student who completed more than 107 credits but less than 144 credits
- Senior-2: a student who completed more than 143 credits

Category	Freshman	Sophomore	Junior	Senior-1	Senior-2	Total Credits	%
Humanities and Social Sciences	6	4	3	5	6	24	13.3
Basic Sciences	22	9	5	3	0	39	21.7
Engineering Sciences	8	12	21	6	0	47	26.1
Applied Engineering Sciences	0	12	10	26	22	70	38.9
Total	36	37	39	40	28	180	100
University Requirements	6	4	4	4	6	24	13.3
College Requirements	30	3	5	3	4	45	25.0
Discipline Requirements	0	30	30	12	0	72	40.0
Major Requirements	0	0	0	21	18	39	21.7
Total	36	37	39	40	28	180	100

Table 6 Conformity to Supreme Council Criterion

The EEE program consists of 69 courses: 61 compulsory courses (159 credits) and 8 elective courses (21 credits). The total 180 credits of the program are distributed between lectures (LEC) and tutorials (TUT), where a tutorial is classified as a problem solving session (PSS) and/or a practical work/laboratory session (PLS). The one credit of a tutorial corresponds to 2-3 hours to provide sufficient practical training for the students. Thus, the total contact hours of learning are around 300 hrs.

7. SAMPLE STUDY PLAN and COURSE SEQUENCE

A sample study plan for the EEE program is presented as one recommended sequence to complete the graduation requirements of the bachelor program over 10 main semesters, the Fall and Spring semesters per academic year. Since the program is based on the credit hours system of education, the student does not have to take the courses during the semester indicated in the study plan as long as the course prerequisites are satisfied.

The EEE curriculum encourages students to interact with the industrial sector and government agencies by offering two industrial training courses in at least two summer sessions. Also, the curriculum gives the student the opportunity to select courses from

a number of electives. The students will be trained on teamwork and be exposed to projects about Electrical Energy Engineering during their practical training and graduation projects.

Remarks:

(0) Industrial training courses to be completed in the summer sessions

(1) General elective course (group E-1, 2 credits per course): GENN301, GENN310, GENN311, GENN321, GENN326, GENN327, GENN331, GENN332

(2) Major elective course (group E-2, 3 credits per course): Set A: EPMN411, EPMN412, EPMN413, EPMN414, EPMN415, EPMN416, EPMN417, EPMN418, EPMN419, EPMN428, EPMN429 Set B: EPMN420, EPMN421, EPMN422, EPMN423, EPMN424, EPMN425, EPMN426, EPMN427, EPMN430

8. COURSE CONTENTS

8.1 University-Core Courses

GENN001	Humanities and Engineering Compulsory, Credits: 2 (2+0+0)
	Prerequisite(s): none History of Technology: Engineering and technology in a cultural, social, and historical context. Development of technology as a key to history of civilization in a comparative perspective - Exploring Humanities: Modes of thought found within humanities and social sciences. Humanities for Engineers: Humanities themes of increased complexity - Different work methodologies - Critical analysis of information & choice of argumentation - Work methodologies and pedagogical interest.
GENN002	English Language Compulsory, Credits: 2 (1+1+0)
	Writing clear topic sentences, well-developed supporting sentences, and concluding sentences. Editing paragraphs for punctuation & writing errors. Extracting meaning of words from reading texts. Making logical inferences from texts. Discussing opinions and thoughts about daily life topics. Planning, implementing and delivering group presentations. Skimming through and scanning text for details. Developing critical thinking skills.
GENN004	Computers for Engineers Compulsory, Credits: 2 (1+0+2)
	Prerequisite(s): none Developing basic concepts of algorithmic thinking to solve problems of relevance in engineering practice and implementing these algorithms using high-level computer language. Using data types, input/output commands, loops, control structures, functions, arrays, and other programming language constructs in a computer program. Evaluating and interpreting the results of programming work.
GENN101	<u>Technical Writing</u> Compulsory, Credits: 2 (1+1+0)
	Prerequisite(s): GENN002 + 28 credits Discovering and outlining ideas. Organizing outlines. Ways To begin the three parts of technical writing. Writing abstracts, summaries, and conclusions of long reports. The thesis statement. Forms: letters, memos, reports, scientific articles, job description, CV, references and footnotes. Selection of key words, titles, and subtitles. Editing, revising and proof- reading techniques. Electronic word processing and technical writing, vocabulary building, and basic types and patterns of argument.
GENN102	<u>Fundamentals of Management</u> Compulsory, Credits: 2 (1+1+0)
	Prerequisite(s): 28 credits Introduction to management, Historical view and evolution of concepts. Basic Managerial Functions: Planning, Strategies, Objectives, MBO;

	Organizing, Departmentation, Job Description; Elements of Human Resource Management: Staffing, Directing, Controlling. Total Quality Management, Continuous Improvement. Engineering Applications.
GENN201	Compulsory, Credits: 2 (1+1+0) Prerequisite(s): GENN101 Analyzing the audience. Selecting presentation topics and objectives. Recognizing different types of speeches and presentations. Overcoming nervousness and developing confidence while addressing an audience. Researching and generating information for informative presentations. Chucking presentation content. Designing effective visual aids. Using explicit and effective transitions throughout a presentation. Creating benefit statements for persuasive presentations. Using persuasive devices such as pathos and logos in speeches. Planning and delivering informative, persuasive, entertaining and inspiring presentations. Handling question and answer sessions effectively.
GENN204	Accounting Compulsory, Credits: 2 (1+1+0) Prerequisite(s): 42 credits Basic accounting concepts: Accounting terms and assumptions. Accounting Methodology: balance sheet, income statement, cash flow statement. Income Determination: Cash Effects, Basis of Accounting. Accounting ratio – measuring the performance – cost concepts – cost accumulation – cost allocation – cost/volume/profit analysis – budgets – forecasting. Cost Accounting.
GENN210	Risk Management and Environment Compulsory, Credits: 2 (1+1+0)Prerequisite(s): GENN102Risk Management: Risk Management.Introduction. Risk Definition. Basic Axioms Behind Risk Management.Systemic Approach to Handling Risk . Principle of Risk Management: Identification of Risks. Preliminary Risk Analysis (PRA). Risk Assessment.Risk Lagement: Identification of Risks.Preliminary Risk Analysis (PRA). Risk Assessment.Risk Evaluation. Risk Control.Hierarchies of Control.Control. Monitoring and Reviewing. Documentation.Study of a practical problem in which the student applies Basic Risk Management Environment: Environmental Systems: Local, Regional and Global. Influence of Air Pollutants on the, Environment, Water Pollutants, Industrial Waste, Hazardous Wastes, Management of Pollutant Releases, Pollution Prevention, Recycling of Waste Materials, Waste Treatment Technologies, Ultimate Disposal of Wastes, Water Treatment Technologies. Control of Air Pollution, Contaminated Land and Its Reclamation, Principals and Uses of the Environmental Risk Assessment, Environmental Risk Assessment Methodology, Environmental Impact Assessment Environmental Health Risk Assessment. National and International regulations.

GEN N221	Economics			
	Compulsory, Credits: 2 (1+1+0)			
	Prerequisite(s): 42 credits			
	Economics as a Discipline: Economics as a Social Science, Micro-			
	economics and Macroeconomics, Theories in Economics, Barriers to			
	Resources and Production Production Possibility Boundaries Choices			
	and Opportunity Costs Resource Use (Fundamental Choices) Demand			
	and Supply: The Mechanics of a Market. Demand and Supply.			
	Consumers Behavior (Demand, Individual Demand and Market Demand),			
	Properties of Demand Curves, Demand versus Quantity Demanded,			
	Producers Behavior: Supply, Individual Supply and Market Supply,			
	Properties of Supply Curves, Supply versus Quantity Supplied,			
	Equilibrium of Demand and Supply, Adjustment in Market Equilibrium.			
	Supply and Demand Analysis: Economic Analysis, Demand Shifts:			
	Substitutes and Complements, Demand Shifts. Superior and Interior Goods, Price Collings, Price Floor, Excise Taxes, Price Flosticity of			
	Demand: Price Sensitivity Price Elasticity of Demand Measuring Price			
	Elasticity of Demand with the Arc Formula. Price Elasticity of Demand and			
	Slope, Price Elasticity of Demand and Total Revenue, Determinants of			
	Price elasticity of Demand, Other Elasticities. Perfect Competition and			
	Monopoly Production and Input Use: Production, Production Functions,			
	Short-Run Functions, Long-Run Production, Choices of Inputs. Economic			
	Costs: Economic Costs, Short-Run Costs, Short-Run Cost Curves, Long-			
	Interest Rates Time Value of Money Feasibility Studies Project			
	Economic Analysis Depreciation Eactor Markets: Perfect and Imperfect			
	Competition.			
GENN301	Ethics and Legislation			
	Elective (group E-1), Credits: 2 (1+1+0)			
	Prerequisite(s): 80 credits			
	Engineering profession: Ethical issues in engineering practice. Conflicts			
	between business demands and professional ideals. Social and ethical			
	studies Value Crisis in contemporary society Nature of values			
	Psychological values. Societal values. Aesthetic values. Moral and ethical			
	values. Work ethics and professional ethics.			
	The legal rule: Mandatory and complementary. Sources of Law. Formal			
	sources: Statutory Law, Custom, the Principles of natural Law and rules of			
	justice. Informal sources: Jurisprudence, Doctrine. Application of Law.			
	Holders of right; Natural persons, Juristic persons. Theory of Obligation;			
	definition, forms. Sources of Obligations. Labor Law. Safety and			
	Interpretation Responsibilities Dissolution and compensation of			
	Damage. Contracts.			

GENN310 Advanced Risk Management					
Elective (group E-1), Credits: 2 (1+1+0)	Elective (group E-1), Credits: 2 (1+1+0)				
Prerequisite(s): GENN210 + MIHN203	Prerequisite(s): GENN210 + MIHN203 Poviow of the Basic Pick Avience and Concenter Evolution of Pick				
Concepts and Terminology Einancial and Industr	ial Pick: Comparison				
and Contrast Probabilistic Nature of Risk System	Decomposition Legal				
and Regulatory Risks. Tools for Risk Assessm	ent: Probability and				
Consequences: Event Tree, Fault Tree, FMECA, F	EMEA. MOSAR (The				
French Approach), Simulation, Optimization and (Operations Research.				
HACCP: principles and applications. HAZOP.Qualit	ative and Quantitative				
Risk Assessments (QRA). Quantitative Risk Ass	essment: Qualitative				
Aspects of System Analysis (Quantification of Basi	c Events. Confidence				
Interval. Quantitative Aspects of System Analysis.	System Quantification				
for Dependent Events. Human Reliability. Uncer	tainty Quantification).				
Operational Risk. Reporting Risk Operations. Secto	ral Risk Management.				
Specific Risk Topics: Risk Specific to Confined Space	es. The Special Case				
Risk Management and Social Protection, Disaster F	Pisk Management and				
Vulnerability Reduction, Can Risk be a Management	Style?				
GENN311 Technical Writing in Arabic					
Elective (group E-1), Credits: 2 (1+1+0)					
Prerequisite(s): GENN101 + 80 credits					
Review of the Basics of Arabic Grammar and Mecha	nics. Writing Effective				
Sentences and Paragraphs Using Arabic Langua	ige. Discovering and				
Outlining Ideas. Writing Abstracts, Summaries, and	Conclusions of Long				
Reports. The thesis Statement. Writing Technica	I Forms Using Arabic				
Language: Letters, Memos, Reports, Scientific Artic	cles, Job Description,				
CV. Whiling References and Foolholes. Selection	or Key Words, Thes				
Word Processing and Technical Writing. Integrating	Graphs Tables and				
Charts in Technical Documents. Vocabulary Buildi	ng. Basic Types and				
Patterns of Argument: Terminology, Building Sub-A	rguments of Fact and				
Policy.	5				
ة و ميكانيكيات اللغة العربية - الأخطاء الشائعة في استخدامات اللغة	مراجعة أسس القواعد النحويا

	French, German, Spanish, Italian, Japanese, Chinese, etc, and to study cultural characteristics of such foreign languages from historical, geographical, literature, economic, and social viewpoints. Topics include, but not limited to, the basics of language grammar and mechanics, writing effective sentences and paragraphs, vocabulary building, writing technical engineering documents and writing technical forms: letters, memos,
	reports, scientific articles, job description, resumes and curriculum vitas.
GENN326	Marketing Elective (group E-1), Credits: 2 (1+1+0) Prerequisite(s): GENN102 + 80 credits Introduction. The Field of Sales; Strategic Sales Force Management. The Personal Selling Process and Sales Force Organization. Profiling and Recruiting Salespeople; Selecting and Hiring Applicants, Developing the Sales Program, Sales Force Motivation, Sales Force Compensation, Expenses and Transportation; Leadership of a Sales Force, Forecasting Sales and Developing Budgets; Sales Territories, Analysis of Sales Volume, Marketing Cost & Profitability Analysis, Performance Evaluation; Ethical and Legal Responsibilities tender writing.
GENN327	Selections of Life-Long Skills Elective (group E-1), Credits: 2 (1+1+0) Prerequisite(s): GENN201 Communicating Clearly - Managing Time and Resources - Making Decisions - Delegating Successfully - Motivating People - Managing Teams - Negotiating Successfully - Minimizing Stress - Getting Organized - Managing Changes - Interviewing People - Managing Your Career - Balancing Work and Life - Thinking Creativity and Innovation - Influencing People – Systems Thinking – Interpersonal Management Skills – Entrepreneurial Skills.
GENN331	Business Communication Elective (group E-1), Credits: 2 (1+1+0) Prerequisite(s): GENN201 Skills for effective communication in the workplace; constructing and delivering persuasive business presentations; theoretical and experiential knowledge of argumentation and debate for informal and formal presentations; style, layout, and convention of business writing; writing business proposals, progress reports, and feasibility reports; common areas of miscommunication.
GENN332	Service Management Elective (group E-1), Credits: 2 (1+1+0) Prerequisite(s): GENN102 + 80 credits Role of services in the economy, The nature of services, Service quality, Service Strategy, Developing new services, The role of technology in supporting service delivery, Design of services, Capacity planning and managing queues, Quantitative methods for service management.

8.2 College-Core Courses

CHEN001	Chemistry
	Compulsory, Credits: 3 (2+2+1)
	Prerequisite(s): none
	Gases; Applications to gaseous law; Mass balance and heat balance in
	combustion processes of fuels; Solutions & separation techniques;
	Applications to electrochemistry; Corrosion; Water treatment; Building
	materials; Environmental Engineering; Selected chemical industries:
	rentilizers, dyes, polymers, sugar, petro-chemicals, semi-conductors, oil and fate, industrial systems: Chemical Vapor deposition
	and faits, industrial systems, chemical vapor deposition.
GENN003	Basic Engineering Design
	Compulsory, Credits: 2 (1+1+0)
	Prerequisite(s): none
	Introduction to Design: Problem description and Introduction to Internet
	Communication - Project Management. Project Management Application, Broblem Solving Techniques: Broblem Definition, Design Constraints
	Creative Thinking and Problem Solving: Introduction to critical and
	creative thinking nature of design problems - Brainstorming seminar list
	of possible and impossible solutions and generating Ideas - Creative
	Thinking and Decision making: Product life cycles . Selection of idea (s).
	Final decision matrix, Justify decision - The Design Matrix: Context,
	purpose and requirements of engineering design - Analyze selected
	solution/preliminary design - Automated Design & the Positive Attitudes
	for Creativity - Systematic generation and evaluation of ideas.
MDPN001	Engineering Graphics
	Compulsory, Credits: 3 (1+0+5)
	Prerequisite(s): none
	Techniques and skills of engineering drawing, normal and auxiliary
	projections. Solid geometry. Intersections between planes and solids.
	Development, sectioning. Drawing and joining of steel frames. Assembly
	drawing of some mechanical parts.
MDPN002	Fundamentals of Manufacturing Engineering
	Compulsory, Credits: 3 (2+1+2)
	Prerequisite(s): none
	Engineering Materials - Elements of Manufacturing Processes, material
	and molding processes - Forming in the solid state, motal forming, forming
	of plastics and powder metallurgy - Material Joining processes, welding
	soldering and brazing riveting joining by mechanical elements assembly
	processes - Material removal processes, metal cutting and finishing
	processes - Computer applications in manufacturing - Term mini-project.
MECN001	Mechanics-1 (Statics)
	Compulsory, Credits: 2 (1+3+0)
	Prerequisite(s): none
	Statics of particles, forces in three-dimensions, vector algebra; equivalent
	systems of forces, resultant of a group of forces, moments of forces,

	moment of a couple, reduction of a system of forces, wrench; equilibrium of rigid bodies in two dimensions, reactions at supports and connections for a 2D structure, 2D trusses, equilibrium of rigid bodies in three dimensions, reactions at supports and connections for a three dimensional structure; centroids and centers of gravity, center of gravity of 2D bodies, centroids of areas and lines, first moments of areas and lines, composite plates and wires; moments of inertia, moments of inertia of areas, second moment, or moment of inertia of an area, polar moment of inertia, radius of gyration of an area, parallel-axis theorem, moments of inertia of composite areas, product of inertia, principal axes and principal moments of inertia, moments of inertia of masses, moment of inertia of a mass, parallel axis theorem, moments of inertia, principal axes and principal moments of inertia.
MECN002	Mechanics-2 (Dynamics)
	Prerequisite(s): MECN001
	<u>Kinematics of particles:</u> rectilinear motion of particles, position, velocity and acceleration, uniform rectilinear motion, uniformly accelerated rectilinear motion, curvilinear motion, derivatives of vector functions, rectangular components of velocity and acceleration, relative motion, tangential and normal components of acceleration, motion of a particle in a circular path, velocity and acceleration of a particle in polar coordinates. <u>Kinetics of particles:</u> Newton's second law, linear momentum of a particle, equations of motion with applications in Cartesian coordinates, tangential and normal directions, polar coordinates, free vibrations of particles, simple harmonic motion; energy & momentum methods, work of a force, kinetic energy of a particle, principle of work and energy, applications, power and efficiency, potential energy, conservation of energy, principle of impulse and momentum, impulsive motion, impact, direct central impact and coefficient of restitution, oblique central impact.
MTHN001	Introduction to Linear Algebra and Analytic Geometry
	Compulsory, Credits: 3 (2+3+0) Prerequisite(s): none
	Matrix algebra, determinants, inverse of a matrix, row equivalence,
	elementary matrices, solutions of linear systems of equations; parabola,
	equations; solid geometry, line, plane, guadratic surfaces.
MTHN002	<u>Calculus I</u>
	Compulsory, Credits: 3 (2+3+0)
	Functions, graphing of functions, combining functions, trigonometric
	functions; limits and continuity; differentiation; inverse functions;
	exponential and logarithmic functions; inverse trigonometric functions;
	L'Hopital's rule; Taylor and Maclaurin expansions.

MTHN003	<u>Calculus II</u> Compulsory, Credits: 3 (2+3+0)
	Prerequisite(s): MTHN002
	Anti-derivatives; indefinite integrals; techniques of integration; definite
	integrals, applications of definite integrals; functions of several variables;
	partial derivatives, applications for partial derivatives.
MTHN102	Multivariable Calculus and Linear Algebra
	Compulsory, Credits: 3 (2+3+0)
	Prerequisite(s): MTHN001 + MTHN003
	Double integrals, double integrals in polar coordinates; triple integrals,
	triple integrals in spherical and cylindrical coordinates; applications of
	double and triple integrals; line and surface integrals; vector analysis,
	divergence and Stokes' theorems, vector identities: III factorization:
	vector spaces: inner product spaces: eigenvalues and eigenvectors:
	diagonalization of matrices: functions of matrices.
MTHN203	Probability and Statistics
	Compulsory, Credits: 3 (2+3+0)
	Prerequisite(s): MTHN102
	Probability axioms; probability laws; conditional probability; random
	variables; discrete and continuous distributions; joint distribution;
	computer simulation; sampling; measures of location and variability;
	parameter estimation, testing of hypothesis.
PHYN001	Mechanics, Oscillations, Waves and Thermodynamics
PHYN001	Mechanics, Oscillations, Waves and Thermodynamics Compulsory, Credits: 3 (2+2+1)
PHYN001	<u>Mechanics, Oscillations, Waves and Thermodynamics</u> Compulsory, Credits: 3 (2+2+1) Prerequisite(s): none
PHYN001	Mechanics, Oscillations, Waves and Thermodynamics Compulsory, Credits: 3 (2+2+1) Prerequisite(s): none Physics and measurements; elastic properties of solids; universal gravitation and motion of planets; fluid mechanics (statics and
PHYN001	Mechanics, Oscillations, Waves and Thermodynamics Compulsory, Credits: 3 (2+2+1) Prerequisite(s): none Physics and measurements; elastic properties of solids; universal gravitation and motion of planets; fluid mechanics (statics and dynamics): oscillatory motion: wave motion sound waves: thermo-
PHYN001	Mechanics, Oscillations, Waves and Thermodynamics Compulsory, Credits: 3 (2+2+1) Prerequisite(s): none Physics and measurements; elastic properties of solids; universal gravitation and motion of planets; fluid mechanics (statics and dynamics); oscillatory motion; wave motion, sound waves; thermo- dynamics temperature heat and the first law of thermodynamics the
PHYN001	Mechanics, Oscillations, Waves and Thermodynamics Compulsory, Credits: 3 (2+2+1) Prerequisite(s): none Physics and measurements; elastic properties of solids; universal gravitation and motion of planets; fluid mechanics (statics and dynamics); oscillatory motion; wave motion, sound waves; thermo- dynamics, temperature, heat and the first law of thermodynamics, the kinetic theory of gases, heat engines, entropy and the second law of
PHYN001	Mechanics, Oscillations, Waves and Thermodynamics Compulsory, Credits: 3 (2+2+1) Prerequisite(s): none Physics and measurements; elastic properties of solids; universal gravitation and motion of planets; fluid mechanics (statics and dynamics); oscillatory motion; wave motion, sound waves; thermo- dynamics, temperature, heat and the first law of thermodynamics, the kinetic theory of gases, heat engines, entropy and the second law of thermodynamics. Laboratory experiments on course topics.
PHYN001	Mechanics, Oscillations, Waves and Thermodynamics Compulsory, Credits: 3 (2+2+1) Prerequisite(s): none Physics and measurements; elastic properties of solids; universal gravitation and motion of planets; fluid mechanics (statics and dynamics); oscillatory motion; wave motion, sound waves; thermo- dynamics, temperature, heat and the first law of thermodynamics, the kinetic theory of gases, heat engines, entropy and the second law of thermodynamics. Laboratory experiments on course topics. Electricity and Magnetism
PHYN001 PHYN002	Mechanics, Oscillations, Waves and Thermodynamics Compulsory, Credits: 3 (2+2+1) Prerequisite(s): none Physics and measurements; elastic properties of solids; universal gravitation and motion of planets; fluid mechanics (statics and dynamics); oscillatory motion; wave motion, sound waves; thermo- dynamics, temperature, heat and the first law of thermodynamics, the kinetic theory of gases, heat engines, entropy and the second law of thermodynamics. Laboratory experiments on course topics. Electricity and Magnetism Compulsory, Credits: 3 (2+2+1)
PHYN001 PHYN002	Mechanics, Oscillations, Waves and Thermodynamics Compulsory, Credits: 3 (2+2+1) Prerequisite(s): none Physics and measurements; elastic properties of solids; universal gravitation and motion of planets; fluid mechanics (statics and dynamics); oscillatory motion; wave motion, sound waves; thermo- dynamics, temperature, heat and the first law of thermodynamics, the kinetic theory of gases, heat engines, entropy and the second law of thermodynamics. Laboratory experiments on course topics. Electricity and Magnetism Compulsory, Credits: 3 (2+2+1) Prerequisite(s): none
PHYN001 PHYN002	Mechanics, Oscillations, Waves and Thermodynamics Compulsory, Credits: 3 (2+2+1) Prerequisite(s): none Physics and measurements; elastic properties of solids; universal gravitation and motion of planets; fluid mechanics (statics and dynamics); oscillatory motion; wave motion, sound waves; thermo- dynamics, temperature, heat and the first law of thermodynamics, the kinetic theory of gases, heat engines, entropy and the second law of thermodynamics. Laboratory experiments on course topics. Electricity and Magnetism Compulsory, Credits: 3 (2+2+1) Prerequisite(s): none Electric field; Gauss' law; electrostatic potential; capacitance and dielectrics;
PHYN001 PHYN002	Mechanics, Oscillations, Waves and Thermodynamics Compulsory, Credits: 3 (2+2+1) Prerequisite(s): none Physics and measurements; elastic properties of solids; universal gravitation and motion of planets; fluid mechanics (statics and dynamics); oscillatory motion; wave motion, sound waves; thermo- dynamics, temperature, heat and the first law of thermodynamics, the kinetic theory of gases, heat engines, entropy and the second law of thermodynamics. Laboratory experiments on course topics. Electricity and Magnetism Compulsory, Credits: 3 (2+2+1) Prerequisite(s): none Electric field; Gauss' law; electrostatic potential; capacitance and dielectrics; current and resistance; direct current circuits; magnetic fields, sources of
PHYN001 PHYN002	Mechanics, Oscillations, Waves and Thermodynamics Compulsory, Credits: 3 (2+2+1) Prerequisite(s): none Physics and measurements; elastic properties of solids; universal gravitation and motion of planets; fluid mechanics (statics and dynamics); oscillatory motion; wave motion, sound waves; thermo- dynamics, temperature, heat and the first law of thermodynamics, the kinetic theory of gases, heat engines, entropy and the second law of thermodynamics. Laboratory experiments on course topics. Electricity and Magnetism Compulsory, Credits: 3 (2+2+1) Prerequisite(s): none Electric field; Gauss' law; electrostatic potential; capacitance and dielectrics; current and resistance; direct current circuits; magnetic fields, sources of magnetic field; Faraday's law; Maxwell's equations; inductances; magnetic
PHYN001 PHYN002	Mechanics, Oscillations, Waves and Thermodynamics Compulsory, Credits: 3 (2+2+1) Prerequisite(s): none Physics and measurements; elastic properties of solids; universal gravitation and motion of planets; fluid mechanics (statics and dynamics); oscillatory motion; wave motion, sound waves; thermo- dynamics, temperature, heat and the first law of thermodynamics, the kinetic theory of gases, heat engines, entropy and the second law of thermodynamics. Laboratory experiments on course topics. Electricity and Magnetism Compulsory, Credits: 3 (2+2+1) Prerequisite(s): none Electric field; Gauss' law; electrostatic potential; capacitance and dielectrics; current and resistance; direct current circuits; magnetic fields, sources of magnetic field; Faraday's law; Maxwell's equations; inductances; magnetic properties of matter. Laboratory experiments on the course topics.
PHYN001 PHYN002 EEEN280	Mechanics, Oscillations, Waves and Thermodynamics Compulsory, Credits: 3 (2+2+1) Prerequisite(s): none Physics and measurements; elastic properties of solids; universal gravitation and motion of planets; fluid mechanics (statics and dynamics); oscillatory motion; wave motion, sound waves; thermo- dynamics, temperature, heat and the first law of thermodynamics, the kinetic theory of gases, heat engines, entropy and the second law of thermodynamics. Laboratory experiments on course topics. Electricity and Magnetism Compulsory, Credits: 3 (2+2+1) Prerequisite(s): none Electric field; Gauss' law; electrostatic potential; capacitance and dielectrics; current and resistance; direct current circuits; magnetic fields, sources of magnetic field; Faraday's law; Maxwell's equations; inductances; magnetic properties of matter. Laboratory experiments on the course topics.
PHYN001 PHYN002 EEEN280	Mechanics, Oscillations, Waves and Thermodynamics Compulsory, Credits: 3 (2+2+1) Prerequisite(s): none Physics and measurements; elastic properties of solids; universal gravitation and motion of planets; fluid mechanics (statics and dynamics); oscillatory motion; wave motion, sound waves; thermo- dynamics, temperature, heat and the first law of thermodynamics, the kinetic theory of gases, heat engines, entropy and the second law of thermodynamics. Laboratory experiments on the course topics. <u>Seminar-1</u> Compulsory, Credits: 1 (1+0+0) Prerequisite(s): 72 credits + AA Approval Talks and presentations are invited from industrial establishments relevant to the program. The quest speaker should directors the
PHYN001 PHYN002 EEEN280	Mechanics, Oscillations, Waves and Thermodynamics Compulsory, Credits: 3 (2+2+1) Prerequisite(s): none Physics and measurements; elastic properties of solids; universal gravitation and motion of planets; fluid mechanics (statics and dynamics); oscillatory motion; wave motion, sound waves; thermo- dynamics, temperature, heat and the first law of thermodynamics, the kinetic theory of gases, heat engines, entropy and the second law of thermodynamics. Laboratory experiments on course topics. Electricity and Magnetism Compulsory, Credits: 3 (2+2+1) Prerequisite(s): none Electric field; Gauss' law; electrostatic potential; capacitance and dielectrics; current and resistance; direct current circuits; magnetic fields, sources of magnetic field; Faraday's law; Maxwell's equations; inductances; magnetic properties of matter. Laboratory experiments on the course topics. Seminar-1 Compulsory, Credits: 1 (1+0+0) Prerequisite(s): 72 credits + AA Approval Talks and presentations are invited from industrial establishments relevant to the program. The guest speaker should discuss the organization management and recent technologies implemented in

	reports on the guest presentation and deliver their own presentation about the topic. <i>The course is graded as Pass/Fail grade-system.</i>
EEEN380	Seminar-2 Compulsory, Credits: 1 (1+0+0) Prerequisite(s): EEEN280 + GENN201 Students will be required to present seminars on a subject assigned to (or chosen by) them about the latest technology relevant to the program. The grade depends on organization, quality, and content of both the presentation and the report prepared by the student. <i>The course is</i> <i>graded as Pass/Fail grade-system.</i>
EEEN281	Industrial Training-1 Compulsory, Credits: 1 (0+0+3) Prerequisite(s): 72 credits + AA Approval Training on industrial establishments relevant to the program. Training lasts for total of 90 hours, during a period about three weeks. The program training advisor schedules at least one follow up visit to the training venue and formally report on performance of trainee(s). A Mentor in the industrial establishment provides a formal report on the student's performance during training. The student submits a formal report and presentation to be evaluated by a panel of three members with one member being an external examiner appointed from industry or other colleges of engineering. <i>The course is graded as Pass/Fail grade- system.</i>
EEEN381	Industrial Training-2 Compulsory, Credits: 2 (0+0+6) Prerequisite(s): EEEN281 + AA Approval Training on industrial establishments relevant to the program. Training lasts for total of 180 hours, during a minimum period of six weeks. The program training advisor schedules at least two follow-up visits to the training venue and formally report on performance of trainee(s). A Mentor in the industrial establishment provides a formal report on the student's performance during training. The student submits a formal report and presentation to be evaluated by a panel of three members with one member being an external examiner appointed from industry or other colleges of engineering. <i>The course is graded as Pass/Fail grade-</i>
L	system.

EEEN481	Graduation Project-2 Compulsory, Credits: 3 (1+0+6) Prerequisite(s): EEEN480 + AA Approval All students undertake a major project as part of the program. The aim of the project is to provide the students, who work in groups, with an opportunity to implement the appropriate concepts and techniques to a particular design. A dissertation on the project is submitted on which the student is examined orally.
	student is examined orally.

8.3 Discipline Courses

CMPN101	Logic Design-1 Compulsory, Credits: 3 (2+1+2) Prerequisite(s): PHYN002 Number systems and data representation - Boolean algebra - simplification of Boolean functions - logic gates - combinational and sequential logic circuits – Registers, counters, and adders – Memory
CMPN102	Data Structures and Algorithms Compulsory, Credits: 3 (2+1+2)Prerequisite(s): MTHN003 + GENN004Data types and representation – file structures- data structures representation in storage media and memory allocation- linear lists - stacks - queues - memory allocation - trees - graphs - Hashing - searching, sorting algorithms and their analysis-programming project
CMPN103	Programming Techniques Compulsory, Credits: 3 (2+1+2) Pre-requisites: MTHN003 + GENN004 Introduction to software design - evolution and comparison of programming languages - types and characteristics of translators - structured programming - function versus object oriented programming- introduction to parallel programming- program maintenance & testing - documentation - numerical and non-numerical examples-programming project.
CMPN201	Microprocessor Systems-1 Compulsory, Credits: 3 (2+1+2) Prerequisite(s): CMPN101 Computer architecture - CPU architecture - fetch-decode-execute cycle - addressing modes - instruction set - memories (RAM-ROM-Cache- Flash) - memory interfacing - timing diagrams - assembly language - instruction formats - data representation - arithmetic operations
CVEN125	<u>Civil Engineering</u> Compulsory, Credits: 3 (2+2+1) Prerequisite(s): MECN001 <u>Buildings:</u> types of buildings, items within a building, types of foundations, building materials with emphasis on concrete and testing, insulation

	against heat moisture, noise and pollution, Principles of fire protection, tender document.
	<u>Surveying:</u> Principles & applications of surveying sciences with emphasis on plane surveying, Popular techniques and engineering uses of distance, angles and height difference measurements. Applications of mapping, earthwork computations, setting out engineering structures, Integrated digital surveying and mapping using total station, Internet resources.
	Structures: Types of structures, loads, supports, reactions, internal forces, analysis of beams, frames, trusses. Beams subjected to moving loads.
ELCN101	Electronics-1: Basic Electronic Circuits
	Compulsory, Credits: 3 (2+3+0) Prerequisite(s): PHYN002 + PHYN102 Diode circuit applications – Bipolar junction transistor (BJT) - Metal oxide semiconductor transistor (MOST): physical structure, basic configuration, I-V characteristics, biasing - small signal equivalent circuit - Biasing techniques (current source biasing) – Single stage amplifiers – Active Load.
ELCN102	<u>Circuits-1</u>
	Prerequisite(s): MTHN003
	Analysis of resistive circuits by simplifications - Network theorems -
	Analysis of circuits with AC excitation in the time domain – Analysis of AC circuits in the frequency domain – Analysis of AC circuits using
	circuit theorems, loop and mode analysis – Maximum power transfer – RLC circuits – Magnetically coupled circuits - Three phase circuits.
ELCN112	<u>Circuits-2</u> Compulsory, Credits: 3 (2+3+0) Prerequisite(s): ELCN102 + MTHN102 Series and parallel resonant circuits – Application on passive filters – Two port circuits – Fourier and harmonic analysis – Application of Laplace transforms to circuit analysis – Circuit synthesis – Synthesis of lossless
ELCN201	Electronics-2: Analog and Digital Electronics
	Compulsory, Credits: 3 (2+2+1) Prerequisite(s): ELCN101
	Multistage amplifiers and composite circuits - Current mirrors - High
	Feedback amplifiers - Digital logic gates – Seguential circuits (flip-flops.
	shift registers, counters) – Power amplifiers
ELCN203	Signal Analysis Compulsory, Credits: 3 (2+3+0) Prerequisite(s): ELCN102 + MTHN102 Continuous time and discrete time signals and systems - basic system properties - Linear Time Invariant Systems - The C.T and D.T. convolution - Properties of LTI systems - Fourier Series Representation

	of C.T. and D.T. Periodic Signals - Parseval's relation - The C.T. Fourier Transform for periodic and aperiodic signals - Properties of continuous time F.T. – The D.T. Fourier Transform – Properties of D.T. Fourier Transform - Complex exponential and sinusoidal Amplitude Modulation- Demodulation for Sinusoidal AM - Frequency Division Multiplexing - Representation of continuous time signal by its samples - The sampling Theorem - The effect of under-sampling or aliasing - sampling with zero order hold - The Z Transform
ELCN306	Communications-1: Analogue Communications
	Compulsory, Credits: $3(2+2+1)$ Proroquisite(s): ELCN203 + MTHN203
	All Types of AM (DSB-LC, DSB-SC, SSB, VSB, QAM) – AM modulators, and demodulators, advantages and disadvantages- Synchronization circuits - AM applications: Telephone channel multiplexing and superheterodyne receiver -Angle Modulation - Narrow band angle modulated signals - Spectrum of sinusoidal signal (N.B and W.B) - Generation of wide band FM (Indirect and Direct methods)- Demodulation (slope detector, PLL) - De-emphasis and pre-emphasis filtering -compatible stereo - Intersystem comparison – Sampling process – PAM – Quantization (uniform and non-uniform) – PCM – Time division multiplexing – Delta, and adaptive delta modulation – Differential PCM – random process – Stationary and ergodic processes – Mean, correlation, and covariance functions – Power spectral density – Narrow band noise.
EPMN100	Basic Laboratory Compulsory Credits: 3 (2+0+2)
	Prerequisite(s): ELCN102
	Electronic components (resistors, capacitors, inductors, diodes), Use of measuring instruments such as multi-meters and oscilloscopes, Construction and debugging of simple electric circuits, Soldering of components, Basic analog electronic components (LEDs, transistors, MOSFETs, op amps), Basic digital electronic components (inverters, counters, flip flops, shift registers, digital to analog converters), Simple electric/electronic circuit projects
EPMN111	Electrostatics and Magnetostatics
	Compulsory, Credits: 3 (2+3+0) Prerequisite(s): MTHN103 + PHYN002 Review of vectors analysis and vector algebra basics, vector calculus (divergence, gradient, curl, Laplacian), coordinate systems (cartesian, cylindrical and spherical). Electrostatics: Coulomb's law, Gauss's law (integral and differential forms, divergence), electric scalar potential (line integral, gradient), Laplace and Poisson's equations (Laplacian), conduction and polarization, boundary conditions on conductors and between dielectrics, method of images, resistance and capacitance. Magnetostatics: Biot-Savart law, Ampere's law (integral and differential

	forms, curl), magnetic vector potential, Lorentz force, magnetization, boundary conditions between magnetic materials, magnetic energy and inductance.
EPMN201	Microprocessors Electric Energy Applications Compulsory, Credits: 3 (2+2+1) Prerequisite(s): ELCN201 + CMPN101 Introduction to computing. Microprocessors and Microcontrollers. Instruction set and Assembly language programming. Programming in C. Minimum system Hardware Configuration. Timer, Serial communication, and Interrupt programming. Display and Keyboard Interfacing. Signal conditioning. A/D and D/A conversion. Sensors and actuators Interfacing. Applications: Demand Side Management, Electric Machine Drives, Electric Vehicles, Renewable Energy applications, Digital protection. Laboratory experiments on the course topics.
EPMN203	Time Varying Field Applications Compulsory, Credits: 3 (2+3+0)Prerequisite(s): PHYN102 + EPMN111Time varying-fields, Faraday's law, Lenz's law, deducing the equivalent circuit of power transformers, Maxwell's equations, power flow and Poynting theorem, skin effect concept, computation of AC impedance, losses in ferromagnetic materials, complex permeability concept, electromagnetic shielding, proximity sensors, levitation and propulsion
EPMN212	Electrical Measurements Compulsory, Credits: 3 (2+2+1) Prerequisite(s): EPMN100 Errors in measurements - Electronic measurement, Oscilloscopes - Signal generators - Noise sources and reduction techniques - Troubleshooting with instruments - Analog to digital converter, Electronic digital counters, Digital multi-meter - Temperature transducers, Mechanical Transducers, Optical transducers - Analog and Digital Signal Conditioning - Fiber optic in instrumentation, acoustic detectors – Partial discharge detection – High voltage measurements – High current measurements - Electromagnetic field meters. Laboratory experiments on the course topics.
EPMN301	Electrical Machines-1 Compulsory, Credits: 3 (2+2+1) Prerequisite(s): ELCN112 + EPMN203 Introduction to Electrical Machines: Definition of motor and generator, Torque development and the concept of torque angle, Electro- magnetically induced emf. DC Machines: Main constructional features, Types of armature winding, Function of the commutator for motoring and generation action, Factors determining induced emf equation, Factors determining the electromagnetic torque, types of machines, back emf., Performance and characteristics of different types of DC motors, Conventional Speed control and starting, Applications of DC motors, Losses in a DC

	machines. Single-Phase Transformers: Introduction, Constructional features of a transformer, Working principle of a transformer, EMF equation, Transformer on no-load and its phasor diagram, transformer on load and its phasor diagram, transformer on load and its phasor diagram, Equivalent circuit, Losses in a transformer, Open circuit and short circuit test, Calculation for efficiency, condition for maximum efficiency, Auto transformers, Other types of transformers. Three-phase Transformers: Construction of three phase transformers, Types of three phase transformers (i.e., delta-delta, delta-star, star-delta and star-star), Conditions for parallel operation, On load tap changer, ON/OFF load tap changer. Difference between power and distribution transformer, Cooling techniques. Laboratory experiments on the course topics.
EPMN302	Elements of Power Systems
	Prerequisite(s): ELCN102
	Basic concepts of power systems - power system components - power
	system element modeling (transmission lines, transformers, etc.) – transmission line parameters – transmission line performance – per-unit
	system – symmetric components transformation – fault analysis
EPMN313	Control Systems
	Compulsory, Credits: 3 (2+2+1) Prerequisite(s): MTHN103 + ELCN203
	This is a fundamental course on modern control systems in continuous time.
	By completing this course, students should be able to model and analyze
	must be able to design compensators and state feedback controllers to
	achieve both transient and steady state specifications. The course syllabus
	functions, state space models, block diagram simplification, transfer
	response, error analysis, stability analysis, root locus, bode diagrams,
	compensator design, controllability, observability, state feedback, control applications using MATLAB Laboratory experiments on the course topics
INTN125	Mechanical Engineering
	Compulsory, Credits: 3 (2+1+2)
	Prerequisite(s): none (Robotics) principles of Robot motion- degrees of freedom- motor
	control.
	Introduction to thermodynamics – heat transfer – air conditioning and
	alarm and fighting equipment – requirements specifications –
	acceptance criteria
MEPN219	Mechanical Power Engineering
	Prerequisite(s): PHYN002
	First law of thermodynamics and its applications - Second law of

	thermodynamics and its applications – Carnot cycle – Internal combustion engines – Steam power stations – Gas turbine plants – Cooling – Heat transfer (conduction, conviction, radiation) – Heat exchangers – Cooling of electrical equipment- Fluid properties and definitions – Statics of fluids – Basic concept of flow – Flow momentum and energy equations – Flow in pipes – Fluid applications: pumps, fans, and turbines.
MTHN103	Differential Equations
	Compulsory, Credits: 3 (2+3+0)
	Prerequisite(s): MTHN003
	First-order differential equations, separable, exact, linear, homogeneous
	and Bernoulli equations; modeling with first order differential equations;
	variation of parameters: modeling with higher order differential equations:
	series solutions; Laplace transform; properties and applications, shifting
	theorems, convolution theorem; solutions of differential equations using
	Laplace transform; Fourier series; Fourier transform.
MTHN201	Numerical Analysis
	Compulsory, Credits: 3 (2+2+1)
	Prerequisite(s): MIHN102 + MIHN103
	Numerical stability of an algorithm – Linear systems: direct methods
	(Gauss elimination, LU factorization, Choleski) – Iterative methods
	(Jacobi –Gauss-Seidle – SOR). Approximation of Functions: polynomials
	and piecewise polynomial interpolation, splines, discrete least squares.
	Nonlinear equations: Newton's method and its discrete variants, fixed
	point iteration. Numerical integration: Newton- Cotes formulas, Gaussian
	differential equations and stop methods. (Runge Kutte methods) and
	multisten (Adams) methods. Stiff problems
PHYN102	Modern Physics
1111102	Compulsory, Credits: 3(2+2+1)
	Prerequisite(s): PHYN001 + PHYN002
	Introduction to quantum physics; Quantum mechanics; Atomic Physics;
	Molecules and solids; energy states and spectra of molecules, bonding
	in solids, introduction to crystalline properties of semiconductors, free
	electron theory of metals, band theory of solids, electrical conduction in
	diode, Zeener diode and tunnel diode

8.4 Major Courses: EEE

EPMN304	Electrical Machines-2
	Compulsory, Credits: 2 (1+2+1) Proroquisite(s): EPMN301
	Synchronous Machines: Main constructional features of commutator and
	brushless excitation system, Generation of three phase emf, Production of
	rotating magnetic field in a three phase winding, Concept of distribution
	power factor, lag and lead power factor, Operation of single synchronous
	machine independently, Voltage regulation, Necessary conditions of
	parallel operation of alternators, Synchronizing an alternator, Operation of
	synchronous motor, Applications of synchronous machines (as an
	alternator, as a synchronous condenser, etc)
	Three-Phase Induction Motors: Salient constructional features of squirrel
	and its significance, Locking of rotor and stator fields, Rotor resistance,
	inductance, emf and current, Relationship between copper loss and the
	motor slip, Power flow diagram of an induction motor, Factors
	Effect of rotor resistance upon the torque slip relationship, Double cage
	rotor motor and its applications, Starting of 3-phase induction motors,
	DOL, star-delta, auto transformer, Causes of low power factor of induction motors. Testing of 3-phase motor on no load rotor test and find
	efficiency.
	Single-Phase Induction Motors: Construction, Theory of Operation, Effect
	of Main and Auxiliary windings characteristics on starting, Applications
EPMN305	Power System Protection
	Compulsory, Credits: 2 (1+3+0)
	Prerequisite(s): EPMN302
	Elements of a protection system - International practices- Relay
	operating principles - Fault detection - Relay designs - Electro-
	Mechanical relays - Faults in Networks and Machines (Short-circuits, Other types of faults) - Protection Functions: over-current protection
	Earth fault protection, Directional over-current protection, Directional
	earth fault protection, Differential protection, Negative phase unbalance
	protection, Positive sequence under-voltage and phase rotation direction protection. Under or over-frequency protection
EPMN306	Power Electronics
	Compulsory, Credits: 3 (2+2+1)
	Prerequisite(s): ELCN201 POWER SEMICONDUCTOR DEVICES: Principle of operation -

	Characteristics and modeling of power diodes, SCR, power BJT, and
	power MOSFET. PHASE CONTROLLED CONVERTERS: Uncontrolled, semi-controlled, and fully-controlled rectifiers - Converters design and control - Inverter operation - Input power factor - Effect of source inductance - Firing circuits. DC TO DC CHOPPERS: Buck, Boost, and Cuk Converter circuit Analysis, energy Analysis, circuit simulation, continuous and discontinuous modes of operation. Laboratory experiments on the course topics.
EPMN307	Energy Conversion-1
	Compulsory, Credits: 2 (1+3+0) Prerequisite(s): PHYN002 Energy sources (Depleted and Renewable Sources)– energy and sustainable development - energy utilization and growth rates -energy reserve – economics of energy systems -fuels – energy conversion devices for production of various types of energy (Thermal, Mechanical, Electrical) - energy storage – environmental impact of various generating stations.
EPMN308	<u>Digital Control Systems</u> Compulsory, Credits: 3 (2+2+1)
5544000	Prerequisite(s): EMPN313 By completing this course, students should be able to convert linear time invariant systems from continuous-time to discrete-time. Identification of unknown systems is also considered. Students should be able to design digital controllers and filters. The course syllabus includes: sampling continuous-time systems, time-delay systems, transfer functions in z- domain, block diagram simplification, stability analysis, transformation techniques, compensator designs, PID controllers, digital filters, state space models, controllability, observability, state feedback, output feedback, and introduction to system identification. Laboratory experiments on the course topics.
EPMN309	Power Electronics Systems Compulsory, Credits: 3 (2+2+1)
	Prerequisite(s): EPMN306 Single-phase voltage source inverters - Three-phase voltage source inverters- Current source inverters - Closed-loop operation of inverters - Power quality - Reactive power and harmonic compensation - Shunt active power filters - Series active power filters. Laboratory experiments on the course topics.
EPMN401	Electrical Machines Drives
	Prerequisite(s): EPMN309 + EPMN304 Drive Requirements and Specifications, Drive Classifications and Characteristics, Load Profiles and Characteristics, Variable-Speed Drive Topologies, PWM VSI Drive, PWM Techniques, Impact of PWM Waveform. Laboratory experiments on the course topics.

	DC Motor Drives, Induction Motor Drives, Synchronous Motor Drives. Special Motors Drives: Permanent Magnet ac Synchronous Motor
	Drives, Permanent-Magnet Brushless dc Motor Drives, Servo Drives, Stepper Motor Drives Switched-Reluctance Motor Drives and
	Synchronous Reluctance Motor Drive.
EPMN402	Power System Analysis
	Compulsory, Credits: 3 (2+3+0) Prerequisite(s): EPMN302
	Power system modeling – load flow studies – short circuit studies –
	automatic generation and voltage control - power system stability -
	power system security.
EPMN403	High Voltage Technology
	Compulsory, Credits: 3 (2+3+0) Prerequisite(s): MEPN219
	Generation of dc, ac and impulse high voltage – Impulse voltage
	recording – Breakdown in gases and Corona – Theories of conduction
	and breakdown in liquids and solids – High voltage testing – Destructive
	Gas insulated systems – Measurements of natural properties of
	insulation.
EPMN411	Power Quality
	Elective (group E-2, set A), Credits: 3 (2+3+0)
	Prerequisite(s): EPMN302 + AA approval Relevance of Power Quality and the cost of poor power quality -
	Disturbances on AC mains: Sags, Dips, and Swells - Transient Over-
	voltages - Low, medium and high frequency transients - Voltage and
	current harmonics Voltage flicker - Voltage regulation - Frequency
	including Web-based power quality monitoring – power quality mitigation
	devices - On-site surveys of power quality - A system approach to
	grounding - Measurement and mitigation techniques - IEEE, IEC
	Standards - Utility power quality standards.
EPMN412	Electrical Power Distribution Elective (group E-2, set A), Credits: 3 (2+3+0)
	Prerequisite(s): EPMN305 + AA approval
	Components of distribution systems -Overhead lines versus
	underground cables - load characteristics - design of sub-distribution
	distribution - voltage drop and power loss calculations - voltage
	regulation concepts - application of capacitors in power distribution
	systems.
EPMN413	Energy Conservation-2
	Elective (group E-2, set A), Credits: $3(2+3+0)$ Prerequisite(s): EPMN302 + EPMN313 + $\Delta\Delta$ approval
	Load management - Economic dispatch – System voltage control –
	Electricity Tariff - Power factor improvement - Distribution economics -

	Load characteristics- Demand side management alternatives - power factor correction- high efficient motors and lighting - unit commitment-power pools - power system security- state estimation in power systems
EPMN414	Smart Power Grid Elective (group E-2, set A), Credits: 3 (2+3+0) Prerequisite(s): ELCN306 + EPMN302 + AA approval Benefits and definitions relating to Smart Grids – Electric power regulation and tariffs – Load management – Peak power curtailment (leveling) - Power network interconnection – Remote area generation and smart grid's role in renewable energy generation – Automation and monitoring of bulk power transmission – Power line communications (PLC) and Broad-band over power lines communications (BPL) – Smart energy meters – Load control switches - Interoperability between power grids - The international perspective [Europe's Super Smart Grid].
	$\frac{\Gamma \cup W \in I}{\Gamma \cup V \subseteq V} = \frac{\Gamma \cup V \subseteq I}{\Gamma \cup V \subseteq V} = \frac{\Gamma \cup V \subseteq I}{\Gamma \cup V \subseteq V}$
	Elective (group E-2, set A), Credits: 3 (2+3+0)
	Prerequisite(s): EPMIN302 + EPMIN313 + AA approval
	Load characteristics - load estimation - load torecasting - economic
	assessment - modeling and techniques for petwork planning outgroot studion
	FACTS schomes
	Pawar Otationa
	Elective (group E-2, set A), Credits: 3 (2+3+0) Prerequisite(s): MEPN219 + EPMN307 + AA approval Electric Energy Demand- Electric Energy Sources- Power Plant Economics- Selection of Plant Location and Size- Gas Turbine, Thermal, Hydro-Electric and Nuclear Power Stations- Economic Operation of Steam Plants- Hydro-Thermal Coordination- Major Electrical Equipment in Power Plants.
EPMIN417	Renewable Energy Systems
EPMIN417	Renewable Energy Systems Elective (group E-2, set A), Credits: 3 (2+3+0)
EPMN417	<u>Renewable Energy Systems</u> Elective (group E-2, set A), Credits: 3 (2+3+0) Prerequisite(s): MEPN219 + EPMN307 + AA approval
EPMIN417	<u>Renewable Energy Systems</u> <u>Elective (group E-2, set A), Credits: 3 (2+3+0)</u> <u>Prerequisite(s): MEPN219 + EPMN307 + AA approval</u> Sources of renewable energy - Fundamentals of : wind energy, tidal
EPMIN417	Renewable Energy Systems Elective (group E-2, set A), Credits: 3 (2+3+0) Prerequisite(s): MEPN219 + EPMN307 + AA approval Sources of renewable energy - Fundamentals of : wind energy, tidal wave energy , solar-thermal energy, geothermal energy - photovoltaic
EPMIN417	Renewable Energy Systems Elective (group E-2, set A), Credits: 3 (2+3+0) Prerequisite(s): MEPN219 + EPMN307 + AA approval Sources of renewable energy - Fundamentals of : wind energy, tidal wave energy , solar-thermal energy, geothermal energy - photovoltaic sources - hydro and other common electrical renewable generation solar for a solar thermal energy of evolution appendix of a solar thermal energy - photovoltaic
EPMIN417	Renewable Energy Systems Elective (group E-2, set A), Credits: 3 (2+3+0) Prerequisite(s): MEPN219 + EPMN307 + AA approval Sources of renewable energy - Fundamentals of : wind energy, tidal wave energy , solar-thermal energy, geothermal energy - photovoltaic sources - hydro and other common electrical renewable generation schemes - Selection and sizing of systems components - Detailed design of a typical photovoltaic invortor battory system - Renewable
EPMIN417	Renewable Energy Systems Elective (group E-2, set A), Credits: 3 (2+3+0) Prerequisite(s): MEPN219 + EPMN307 + AA approval Sources of renewable energy - Fundamentals of : wind energy, tidal wave energy , solar-thermal energy, geothermal energy - photovoltaic sources - hydro and other common electrical renewable generation schemes - Selection and sizing of systems components - Detailed design of a typical photovoltaic inverter battery system - Renewable energy integration with existing arid connected power
	Renewable Energy Systems Elective (group E-2, set A), Credits: 3 (2+3+0) Prerequisite(s): MEPN219 + EPMN307 + AA approval Sources of renewable energy - Fundamentals of : wind energy, tidal wave energy , solar-thermal energy, geothermal energy - photovoltaic sources - hydro and other common electrical renewable generation schemes - Selection and sizing of systems components - Detailed design of a typical photovoltaic inverter battery system - Renewable energy integration with existing grid connected power.
EPMN417 EPMN418	Renewable Energy Systems Elective (group E-2, set A), Credits: 3 (2+3+0) Prerequisite(s): MEPN219 + EPMN307 + AA approval Sources of renewable energy - Fundamentals of : wind energy, tidal wave energy , solar-thermal energy, geothermal energy - photovoltaic sources - hydro and other common electrical renewable generation schemes - Selection and sizing of systems components - Detailed design of a typical photovoltaic inverter battery system - Renewable energy integration with existing grid connected power. Power System Switchgear Elective (group E-2, set A) Credits: 3 (2+3+0)
EPMN417 EPMN418	Renewable Energy SystemsElective (group E-2, set A), Credits: 3 (2+3+0)Prerequisite(s): MEPN219 + EPMN307 + AA approvalSources of renewable energy - Fundamentals of : wind energy, tidalwave energy , solar-thermal energy, geothermal energy - photovoltaicsources - hydro and other common electrical renewable generationschemes - Selection and sizing of systems components - Detaileddesign of a typical photovoltaic inverter battery system - Renewableenergy integration with existing grid connected power.Power System SwitchgearElective (group E-2, set A), Credits: 3 (2+3+0)Prerequisite(s): EPMN403 + AA approval
EPMN417 EPMN418	Renewable Energy SystemsElective (group E-2, set A), Credits: 3 (2+3+0)Prerequisite(s): MEPN219 + EPMN307 + AA approvalSources of renewable energy - Fundamentals of : wind energy, tidalwave energy , solar-thermal energy, geothermal energy - photovoltaicsources - hydro and other common electrical renewable generationschemes - Selection and sizing of systems components - Detaileddesign of a typical photovoltaic inverter battery system - Renewableenergy integration with existing grid connected power.Power System SwitchgearElective (group E-2, set A), Credits: 3 (2+3+0)Prerequisite(s): EPMN403 + AA approvalSubstation components - Dimensioning of switchgear installations - Low
EPMN417 EPMN418	Renewable Energy SystemsElective (group E-2, set A), Credits: 3 (2+3+0)Prerequisite(s): MEPN219 + EPMN307 + AA approvalSources of renewable energy - Fundamentals of : wind energy, tidalwave energy , solar-thermal energy, geothermal energy - photovoltaicsources - hydro and other common electrical renewable generationschemes - Selection and sizing of systems components - Detaileddesign of a typical photovoltaic inverter battery system - Renewableenergy integration with existing grid connected power.Power System SwitchgearElective (group E-2, set A), Credits: 3 (2+3+0)Prerequisite(s): EPMN403 + AA approvalSubstation components - Dimensioning of switchgear installations – LowVoltage, Medium Voltage, and High Voltage apparatus – Conductor
EPMN417 EPMN418	Renewable Energy SystemsElective (group E-2, set A), Credits: 3 (2+3+0)Prerequisite(s): MEPN219 + EPMN307 + AA approvalSources of renewable energy - Fundamentals of : wind energy, tidalwave energy , solar-thermal energy, geothermal energy - photovoltaicsources - hydro and other common electrical renewable generationschemes - Selection and sizing of systems components - Detaileddesign of a typical photovoltaic inverter battery system - Renewableenergy integration with existing grid connected power.Power System SwitchgearElective (group E-2, set A), Credits: 3 (2+3+0)Prerequisite(s): EPMN403 + AA approvalSubstation components - Dimensioning of switchgear installations – LowVoltage, Medium Voltage, and High Voltage apparatus – Conductormaterials – Accessories for switchgear installations – Types of circuit
EPMN417 EPMN418	Renewable Energy SystemsElective (group E-2, set A), Credits: 3 (2+3+0)Prerequisite(s): MEPN219 + EPMN307 + AA approvalSources of renewable energy - Fundamentals of : wind energy, tidalwave energy , solar-thermal energy, geothermal energy - photovoltaicsources - hydro and other common electrical renewable generationschemes - Selection and sizing of systems components - Detaileddesign of a typical photovoltaic inverter battery system - Renewableenergy integration with existing grid connected power.Power System SwitchgearElective (group E-2, set A), Credits: 3 (2+3+0)Prerequisite(s): EPMN403 + AA approvalSubstation components - Dimensioning of switchgear installations – LowVoltage, Medium Voltage, and High Voltage apparatus – Conductormaterials – Accessories for switchgear installations – Types of circuitbreakers – Circuit breakers ratings - Arc extinction methods – Surge

	switching transients – fast transients in GIS – Controlled switching.
EPMN419 EPMN428	Protection and Digital Relaying Elective (group E-2, set A), Credits: 3 (2+3+0) Prerequisite(s): EPMN305 + AA approval Bus-bar protection - Transformer protection - Motor protection - Generator protection- Distance protection - Monitoring the performance of power systems (Oscillographic analysis, Synchronized sampling, Fault location, Alarms, etc) - Solid-state relays , Computer relays - Digital systems (Signal Processing, Filtering Overview, Discrete Domain , Digital Filtering, Performance Measurements, Bandwidth, Aliasing) - The Cosine Filter - Relay Ladder Logic.
	Elective (group E-2, set A), Credits: 3 (2+3+0) Prerequisite(s): EPMN402 + AA approval Economic operation – unit commitment – power pools – deregulation of power industry – active power control – reactive power control – load frequency control
EPMN429	Environmental Impact of Electricity Elective (group E-2, set A), Credits: 3 (2+3+0) Prerequisite(s): AA approval Air impacts: [Climate change, Acid rain, Ozone (smog) and fine particulates, Air toxics (mercury)], Water impacts: [Consumption of water resources, Pollution of water bodies], Land impacts: [On-site land impacts, Off-site land impacts], Generation of wastes: [Solid waste, Radio-active waste from nuclear power stations], Effects on wild life, Electric and magnetic fields, Environmental assessment requirements for electric power projects.
EPMN420	Electrical Machines Design Elective (group E-2, set B), Credits: 3 (2+3+0) Prerequisite(s): EPMN304 + AA approval Magnetic, electric and thermal properties of materials used in the construction of electrical machines. Single- and Three-Phase Transformers design: relation between dimensions and rating as well as performance, estimating design details to meet particular requirements. Three-Phase Induction Motor design: relation between dimensions and rating as well as performance, estimating design details to meet particular requirements. Single-Phase Induction Motor design: similarity and differences with three-phase induction motors, design details of auxiliary winding corresponding to a particular starting strategy.
EPMN421	Special Electrical Machines Elective (group E-2, set B), Credits: 3 (2+3+0) Prerequisite(s): EPMN304 + AA approval Introduction to the unified theory of machines, permanent-magnet AC synchronous motors, permanent-magnet brushless DC motors, servo

	motors, stepper motors, switched-reluctance motors, synchronous reluctance motors, hysteresis motors, linear motors, micro motors.
EPMN422	Superconductor Applications Elective (group E-2, set B), Credits: 3 (2+3+0) Prerequisite(s): EPMN203 + AA approval Historical note on the discovery of superconductivity, difference between a perfect conductor and a superconductor, Type-I and Type-II superconductors, Meissner effect, diamagnetism, conduction theory of superconductivity, superconductor applications in power engineering; superconducting transformers, superconducting motors and generators, superconducting network current limiters, superconducting cables, other applications (superconducting magnetic levitation vehicles, super- conducting bearings), superconducting magnetic energy storage system for power quality mitigation - future trends in superconductor usage.
EPMN423	Electrical Installation Elective (group E-2, set B), Credits: 3 (2+3+0) Prerequisite(s): EPMN301 + AA approval Load characteristics - Load Assessment - Electric Supply Regulations- Conductors and cables - Installation methods - Design of electrical systems for residential, commercial, and industrial installations - Protection equipment and coordination of protective devices - Voltage drop and short circuit calculations - Electrical safety and Grounding - Electrical drawing.
EPMN424	Mechatronics Elective (group E-2, set B), Credits: 3 (2+3+0) Prerequisite(s): EPMN201 + EPMN313 + AA approval The objective of this course is to allow the students to understand the synergy between mechanical design, computer control and electronic components in arriving at a mechatronics system. Students will be provided with the needed knowledge and understanding of issues related to integrating mechanical, electronic and software components
	towards building mechatronic devices. Subjects such as actuators, sensors as well as electronics and hardware components for mechatronics will be discussed. The syllabus includes the following topics: Introduction to mechatronics system design, Mechanisms for motion transmission systems, Actuators and Sensors with mixed disciplines, Interfacing, Microcontroller-based control systems, Microcontroller-based instrumentation systems, Systems with mixed disciplines, Analogue active filters.

	including robot arms. The course syllabus includes: Piping and instrumentation diagrams, cascade controllers, feed forward controllers, control design of time-delay processes, internal model control, two-
	degree of freedom controllers, hybrid controllers, introduction to model
	predictive control, Smith predictor, implementation of industrial controllers introduction to poplinear controllers robots kinematics
	robots inverse kinematics, path planning, joint control of robotic arms.
EPMN426	Computer Control in Energy Systems
	Elective (group E-2, set B), Credits: 3 (2+3+0)
	This course provides a comprehensive theoretical vet practical look at
	all aspects of distributed control systems and their associated devices
	and systems. It includes new subjects related to advanced PLC topics,
	such as I/O bus networks, the IEC 1131-3 programming standard,
	The course syllabus includes: Evolution of distributed control systems
	(DCS) – local control units architectures – programmable logic
	controllers – programming techniques- discrete input output modules –
	measurements and transducers - function blocks – local control units
	languages - communication requirements - network topologies -
	input/output bus networks - operator interface – SCADA systems –
	Intelligent Control
EPMN427	Intelligent Control Elective (group E-2, set B), Credits: 3 (2+3+0)
EPMN427	Intelligent Control Elective (group E-2, set B), Credits: 3 (2+3+0) Prerequisite(s): EPMN313 + AA approval
EPMN427	Intelligent Control Elective (group E-2, set B), Credits: 3 (2+3+0) Prerequisite(s): EPMN313 + AA approval This course introduces the basics of intelligent control. Many commercial products use intelligent control. For example: washing machines use it to
EPMN427	Intelligent Control Elective (group E-2, set B), Credits: 3 (2+3+0) Prerequisite(s): EPMN313 + AA approval This course introduces the basics of intelligent control. Many commercial products use intelligent control. For example: washing machines use it to determine the amount of detergent and cameras use it to counteract
EPMN427	Intelligent Control Elective (group E-2, set B), Credits: 3 (2+3+0) Prerequisite(s): EPMN313 + AA approval This course introduces the basics of intelligent control. Many commercial products use intelligent control. For example: washing machines use it to determine the amount of detergent and cameras use it to counteract vibrations. This course helps students to understand and design simple
EPMN427	Intelligent Control Elective (group E-2, set B), Credits: 3 (2+3+0) Prerequisite(s): EPMN313 + AA approval This course introduces the basics of intelligent control. Many commercial products use intelligent control. For example: washing machines use it to determine the amount of detergent and cameras use it to counteract vibrations. This course helps students to understand and design simple intelligent controllers. The syllabus includes the following: Artificial intelligence basics furmer and furmer furmer login
EPMN427	Intelligent Control Elective (group E-2, set B), Credits: 3 (2+3+0) Prerequisite(s): EPMN313 + AA approval This course introduces the basics of intelligent control. Many commercial products use intelligent control. For example: washing machines use it to determine the amount of detergent and cameras use it to counteract vibrations. This course helps students to understand and design simple intelligent controllers. The syllabus includes the following: Artificial intelligence basics, fuzzy set theory, fuzzy logic, Fuzzy reasoning, Fuzzy controllers. Fuzzy PID control. Neural networks introduction, perception
EPMN427	Intelligent Control Elective (group E-2, set B), Credits: 3 (2+3+0) Prerequisite(s): EPMN313 + AA approval This course introduces the basics of intelligent control. Many commercial products use intelligent control. For example: washing machines use it to determine the amount of detergent and cameras use it to counteract vibrations. This course helps students to understand and design simple intelligent controllers. The syllabus includes the following: Artificial intelligence basics, fuzzy set theory, fuzzy logic, Fuzzy reasoning, Fuzzy controllers, Fuzzy PID control, Neural networks introduction, perception model, classification problem, multilayer networks, Feed forward
EPMN427	Intelligent Control Elective (group E-2, set B), Credits: 3 (2+3+0) Prerequisite(s): EPMN313 + AA approval This course introduces the basics of intelligent control. Many commercial products use intelligent control. For example: washing machines use it to determine the amount of detergent and cameras use it to counteract vibrations. This course helps students to understand and design simple intelligent controllers. The syllabus includes the following: Artificial intelligence basics, fuzzy set theory, fuzzy logic, Fuzzy reasoning, Fuzzy controllers, Fuzzy PID control, Neural networks introduction, perception model, classification problem, multilayer networks, Feed forward networks, back propagation learning algorithms, recurrent networks,
